

Building Maintenance, Inc.
Commercial & Residential Cleaning Service

Children's Day Care Facilities

GCW Building Maintenance, Inc. are particularly appropriate for day care centers with our Clean Green Team approach. Traditional cleaning chemicals can contain hazardous ingredients that can be inhaled or ingested by children. Our cleaning products are [Green Seal](#) certified to assure their safety to children, staff and surfaces. We use equipment and procedures that insure a clean and healthy facility.

GCW offers three basic maintenance packages to meet you're cleaning and maintenance needs. Since we are locally owned and operated, we can adapt these packages to accommodate your individual cleaning requirements.

Cleaning Common Play Areas

The common areas of a day care facility bear the brunt of young children playing and learning. Some facilities have rubber flooring in these common areas, which require special attention when cleaning. Little fingers can leave big fingerprint and handprint smudges. Surfaces that are frequently touched need to be treated for reducing the spread of flu and illness.

We pay special attention to areas that can escape the attention of other cleaning contractors, keeping in mind the small visitors in a day care facility.

Cleaning Toys and Play Equipment

It is crucial that toys are cleaned properly in a day care setting. We do not use bleach as a sanitizer, as we feel there are safer, more environmentally preferred options. Toys are cleaned and sanitized daily, as are tables, chairs, cubbies, and play kitchen surfaces. Each week, shelves are wiped out and sanitized.

Cleaning Restrooms

Restrooms are always a particular cleaning challenge, but even more so in day care centers where children are learning toilet skills. We use the latest cleaning and odor-control methods to keep restrooms clean and smelling fresh.

Kitchen Cleaning

Whether the kitchen is used only by staff for breaks or functions as a preparation area for daily snacks, GCW has the program for maximum care. We clean and disinfect counters, tables, chairs and sinks, as well as cleaning the floor with a germicidal cleaner. Sinks and bright work sparkle with regular cleaning and polishing. Walls behind trash receptacles are regularly cleaned and disinfected.

Cleaning Sleeping / Napping Areas

Sleeping mats are cleaned with a one-step cleaner and disinfectant on a regular basis. Special cleaners are used on cribs to clean and sanitize.
