

GCW Building Maintenance, Inc.

Parking Lot Sweeping Service

Parking lot sweeping is one of the most effective things that should be performed on your parking surface. Not only does parking lot sweeping provide a clean appearance for your business, but it is necessary to preserve the longevity of your parking surface.

GCW Property Maintenance Division uses the type of machinery which will be best suited for your particular parking area. We have vacuum sweepers that will vacuum the dirt out of crevices in the parking surface. Our brush/broom sweepers bristle into the surface to loosen areas that may have dirt ground into them. We also have broom/brush/vacuum/water sweepers for the really dirty parking lot areas.

Back pack blowers are used to blow all dirt from the lot corners, behind parking blocks, around trash bins and any low spot that might be inaccessible by the parking lot sweeping unit. All debris is removed from the premises. Our parking lot sweeping team is well equipped to clean shopping centers, malls, retail centers, office buildings, construction sites, apartment complexes, homeowner associations, cities, highways, factories and interstate highways.
